

General:

- Design based on the standard Macintosh blade and it is attached to a standard handle.
- The characteristics of this laryngoscope are the hinged blade tip, which is controlled by a lever attached to the blade.
- The elevation of the blade tip makes it easy to visualise the larynx while the overall laryngoscopic movement decreases.

McCoy

laryngoscopes

Macintosh

General:  
- standard curved blade

Miller

General:  
- a straight blade which is inserted beyond the epiglottis

Foregger

General:  
- straight blade; used in difficult intubation in adults
